Ernesto Alexis Vázquez

QA Engineer in @CFOTech IT Global Services Client @Personal
Independet Developer Full Stack with IA Founder @QAdvanced
Argentina

Extracto

QA Engineer specialized in automation, with a focus on complex systems and end-to-end flows in production environments.

I have over 5 years of experience working in banking and telecommunications, designing and implementing automated testing solutions that reduce regression time and improve the reliability of critical systems. I primarily work with Java, Selenium, Cypress, and Playwright, integrating tests across UI, APIs, and batch processes. In my daily work, I automate real-world workflows that include remote execution via SSH, CDR file validation, data processing, and pipeline control within CI/CD environments. Beyond tools, my approach is centered on understanding the business and building quality solutions that truly deliver value—not just increasing test coverage. Currently, I am exploring how to apply AI in QA for: Test scenario generation Automated result analysis Test suite maintenance optimization Faster debugging and validation processes I also share content about automation, software quality, and critical thinking in testing, with a practical and no-nonsense approach. Let's connect. I enjoy exchanging ideas about technology, quality, productivity, and professional growth. <https://github.com/Vazquez-Ernesto>

Experiencia

CFOTech IT Global Services

Quality Engineering (Cliente Personal)

junio de 2025 - Present (1 año 2 meses)

Аргентина

Responsible for ensuring the functional and technical quality of a core rating and mediation application within the Telecom Argentina ecosystem, validating critical processes related to CDR processing and rating.

I work cross-functionally with business, development, and operations teams to ensure correct feature implementation, data integrity, and the stability of systems that support key billing and mediation processes.

Actively involved throughout the entire software development lifecycle, combining functional testing, automation, and continuous improvement of quality processes.

Key responsibilities:

- Designed and executed testing strategies (functional, integration, and regression) for traffic mediation and rating systems.
- Analyzed requirements and participated in user story refinement alongside Product Owners and technical teams.
- Validated CDR processing and data reconciliation across systems involved in the mediation, rating, and billing chain.
- Developed and maintained automated tests to validate critical processes and accelerate regression cycles.
- Integrated automated tests into CI/CD pipelines, promoting quality practices within the development workflow.
- Generated evidence, technical documentation, and ensured traceability between requirements, test cases, and results.
- Contributed to continuous improvement initiatives in the quality process, driving the adoption of testing tools and best practices within the team.
- Provided internal training and supported the adoption of tools aimed at improving testing productivity, including AI-based and automation solutions.

Technologies and tools used:

Test Automation, CI/CD, Jenkins, Cucumber, Selenium, data validation, log analysis, mediation systems, and CDR processing.

Getnet Argentina

QA Analyst Automation (Contratado por RHT)

diciembre de 2024 - junio de 2025 (7 meses)

Buenos Aires y alrededores

As a QA, I worked within the Getnet (Banco Santander) digital payments ecosystem, focusing on acquiring solutions and payment processing platforms for merchants.

My role was centered on ensuring both functional and technical quality of the products, collaborating with business, development, and operations teams in an Agile environment.

Within the Aggregator business model, I contributed to strategic initiatives related to the evolution of the payment system and the integration of new payment methods.

Key responsibilities and contributions:

- Performed functional and technical validation of acquiring solutions and payment methods used by merchants and POS terminals.
- Participated in the development and testing of initiatives related to POSNET terminal billing, ensuring accurate charge generation and data reconciliation.
- Conducted testing and certification of digital wallets for QR payments integrated with Getnet POSNET terminals.
- Validated features related to new onboarding and sales channels, ensuring proper integration with internal systems and commercial platforms.
- Designed and executed functional, integration, and regression tests on payment processing systems.
- Validated system integrations through API testing and database queries, ensuring data consistency and integrity across systems.
- Collaborated with development and product teams in requirement analysis, user story refinement, and acceptance criteria validation.
- Managed and tracked defects, contributing to improving the stability and reliability of payment solutions.

Technologies and tools used:

Functional testing, APIs, SQL databases, Agile methodologies (Scrum), issue tracking tools, and integration validation tools.

Nave Negocios

QA Analyst (Contratado por TCS)

diciembre de 2022 - diciembre de 2024 (2 años 1 mes)

Buenos Aires y alrededores

I worked as a QA on the Nave project, a digital platform by Banco Galicia focused on financial solutions for merchants and SMEs.

My role was centered on ensuring product quality throughout the development lifecycle, validating critical system functionalities and guaranteeing application stability across production and pre-production environments.

Key responsibilities:

- Designed and executed End-to-End, regression, and exploratory tests to ensure the correct behavior of different application modules.
- Validated complex functional workflows within the platform, ensuring proper interaction between frontend, backend, and integrated services.
- Analyzed requirements and participated in user story refinement alongside development and business teams.
- Managed defects and tracked issues in UAT and pre-production environments, contributing to bug prioritization and resolution.
- Validated system integrations through database queries and log analysis, ensuring data consistency.
- Participated in testing processes within Agile (Scrum) teams, collaborating closely with developers and other technical roles to improve product quality.

Technologies and tools used:

Functional testing, E2E testing, SQL, bug tracking, Agile methodologies, UAT environments.

UPEX

Quality Assurance Analyst

junio de 2021 - enero de 2022 (8 meses)

Provincia de Buenos Aires, Argentina

- ✓ Moderator at Upex Academy
- ✓ Onboarding and induction of new academy members
- ✓ User Story review and mentoring (naming conventions, traceability, coverage)
- ✓ Agile methodologies (Scrum)
- ✓ Jira: task tracking, time tracking, and BDD-based User Story analysis
- ✓ Xray: Test Set design, Test Case creation, Test Execution, bug reporting, and re-testing
- ✓ Testing types: Exploratory, Smoke, and Regression
- ✓ SQL queries
